

Company Overview

boraident[®] GmbH

boraident
LASER-NANOTECHNOLOGIES IN GLASS

business units

boraident GmbH is focusing on 4 business activities:

- **glass markings:** Laser-Transfer-Marking Identification (production equipment)
- **glass microstructures:** Laser structuring (Production equipment)
- **sensor systems:** Glass sensors
- **boraglas:** Production of innovative glass

glass markings

Development and production of laser transfer marking systems and Identification systems typically for glass applications with patented technologies.

glass microstructures

Development and manufacturing of laser structuring systems for coated and uncoated flat glass with own patented technologies.

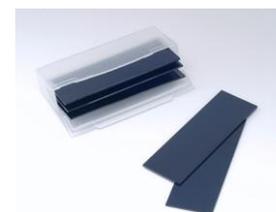

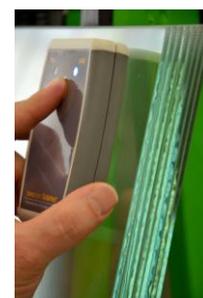

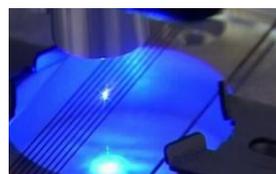

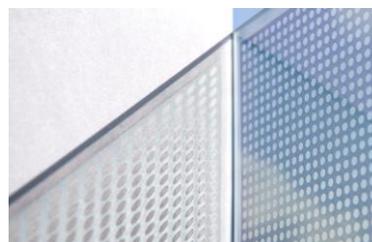

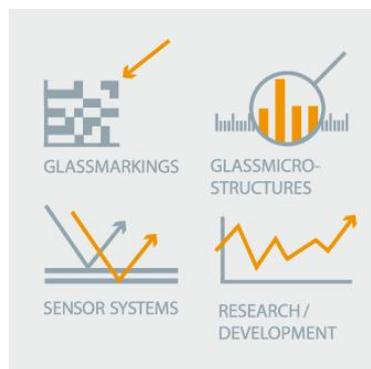

sensor systems

Developments and production of sensors dedicated for glass industry e.g. detections of coatings (plausibility check) and tin and air side as well. Determination of the glass-thickness and numeration of stacked panes are easily and quick done.

boraglas

Development and production of innovative glass products:

- borapore: nano porous glass membranes
- glass microstructures: microstructures glass with standard or customized layout
- filter glass: optical absorption filter
